IV. Machine Performance Overview

The YD-SSJ800 twin-shaft shredder mainly consists of motors, hardened-tooth-surface gearboxes, rotating cutter shafts, movable cutters, frame, base, housing, and operating platform.

Fixed cutters are mounted on the frame, while removable insert-type movable cutters are installed on the rotating cutter shafts. The number of movable cutters depends on the machine model and cutter-shaft size. Once worn, the cutters can be removed and resharpened, significantly reducing long-term maintenance costs and extending the service life of the machine. The claw-type movable cutters operate through rotary shearing. They are made of imported SKD11 steel and, after heat treatment, achieve a hardness above HRC 60, providing long service life, strong cutting performance, and high throughput.

The electrical system uses microcomputer-based PLC control for fully automatic operation. After commissioning, the operator only needs to press F1 to start the complete system automatically and F2 to stop it automatically. This reduces labor costs while helping to ensure a safe operating environment.
